Professional Summary

Computer Science graduate specializing in Cybersecurity, with hands-on experience engineering SOC-style monitoring and log-correlation tools. Leverages a background in visual design to bring structural clarity to complex data for rapid triage, aiming to protect critical network infrastructure with robust observability.

Core Skills

- **Security & Monitoring:** Threat Analysis, Incident Investigation, Log Parsing, Anomaly Detection, MITRE ATT&CK Framework
- **Systems & Development:** Python, Flask, Java, JavaScript, PHP, HTML/CSS, SQL, Git, GitHub, GitLab
- **Databases & Data Infrastructure:** MySQL, MongoDB, Apache Spark, Hadoop, HBase, Hive
- **Architecture & Strategy:** UI/UX Design, Information Architecture, Technical Documentation Layout

Education

Bachelor of Computer Science (Cybersecurity)	Jan 2022 - Jun 2025
University of Wollongong - SIMGE	Singapore
Advanced Diploma in Visual Communication (Graphic Design)	Apr 2015 - Dec 2016
First Media Design School (FMDS)	Singapore

Projects

Sentry: Security Monitoring Dashboard (Python, Flask, HTML, CSS, JavaScript)	Jan 2026 - Mar 2026
▪ Built a full-stack security monitoring interface featuring live log streaming, real-time anomaly detection, and threat severity visualization to support SOC-style incident response. ▪ Designed for rapid incident triage using color-coded severity indicators, scannable event feeds, and KPI cards to reduce analyst decision time.	
Sentinel: Incident Investigation Simulator (Python)	Oct 2025 - Dec 2025
▪ Engineered a multi-stage incident simulation engine generating 60+ realistic logs across brute-force and malware attack scenarios, covering five attack phases from reconnaissance to exfiltration. ▪ Built automated analysis and reporting pipeline with IOC extraction, MITRE ATT&CK technique mapping, and structured remediation plans across immediate, short-term, and long-term actions.	
CityEVChargers Web Application (PHP, SQL, HTML, CSS)	Jan 2025 - Mar 2025
▪ Developed an EV charging station management app with a MySQL backend using parameterized queries throughout to prevent SQL injection, plus output escaping on user-facing data. ▪ Implemented session-based user authentication with hashed passwords, role-based access control for admin functions, and check-in/check-out and search functionality across the application.	
KarmenRider Web Application (Javascript, PHP, SQL, HTML, CSS)	Jan 2025 - Mar 2025
▪ Collaborated in a team of 7 to design and audit the security of a full-stack marketplace application. ▪ Prevented SQL injection by enforcing parameterized queries and schema-level integrity constraints throughout. ▪ Identified and remediated authorization gaps in admin endpoints lacking session validation, reducing exposure to unauthorized data access.	

Experience & Leadership

Professional Studio Practice Intern First Media Design School (FMDS)	Nov 2019 - Jan 2020
▪ Directed corporate asset production under strict quality compliance while managing administrative client workflows and tight project milestones.	
Sub-Committee Member SIM Board Game Society	Jul 2023 - Apr 2024
▪ Coordinated logistics, resource scheduling, and stakeholder requirements for large-scale campus events while streamlining internal team tracking.	

Other Skills

Languages: English (Fluent), Tagalog (Conversational), Mandarin (Basic)
Interests: Reading, Artificial General Intelligence
